

Make Web Filtering on iPads Easy

Securly Filter provides schools with a robust, cloud-based web filtering solution that ensures students can safely and effectively use iPads for learning. With Securly Filter, schools can easily manage and monitor internet usage, ensuring a secure and productive digital environment for students both on and off campus.

Get the power of SmartPAC with Securly Filter

Securly Filter uses [our patented SmartPAC technology](#), which offers seamless filtering without the need for constant connection to the school network, ensuring consistent policy enforcement and reliable performance.

- **No Agents:** SmartPAC is extremely lightweight at around 8 kb in size. It never needs to be updated or patched when iOS updates roll out. Deploy it once, and you're done.
- **100% Cloud:** No more proxying traffic back to the school or reliance on an on-premise appliance. SmartPAC is completely managed in the cloud and is the perfect off-site solution for iPads.
- **Make Authentication a breeze:** We support modern Identity Providers such as Google and Azure, as well as SSO. SmartPAC also allows for deep integration with your MDM or Active Directory, allowing for a zero-touch authentication experience.
- **Browser and Device Agnostic:** Running an older version of iOS? MacOS, or Windows? That's okay with SmartPAC. Have Safari and Chrome on your iPad as well? Not a problem.

Securly Filter also includes...

- **Comprehensive Reporting:** Get detailed insights into student internet usage, helping educators and administrators make informed decisions to enhance student safety and learning outcomes.
- **Off-Campus Filtering:** Ensure student safety anywhere with off-campus filtering capabilities, allowing consistent policy enforcement and protection no matter where your iPads go.
- **AI Chat for Securly Filter:** Teach students how to use generative AI, while maintaining visibility and control over how students interact with it.

[and much more...](#)

Make security simple with cloud-based web filtering designed for schools

With easy setup, the highest-rated support, and unparalleled flexibility, Securly Filter streamlines and simplifies web filtering for busy school IT teams. Keep your students safe on all devices, whether at school, home, or anywhere in between.
